

KNAUFINSULATION

Sant Boi de Llobregat, a 23 de enero de 2023

Apreciado/a colaborador/a,

Mediante este documento, Knauf Insulation declara que el aislamiento en lana mineral de roca con denominación comercial SMART FACADE ROCK 35 es el mismo producto que aparece en la siguiente DAP (número de registro EPD S-P-01847) con el nombre NATURBOARD VENTI GVB / NATURBOARD VENTI.

Por lo tanto, los valores de impacto medioambiental mostrados en la DAP y obtenidos mediante un Análisis de Ciclo de Vida (LCA) son totalmente válidos.

Aprovechamos la ocasión para saludarle atentamente.

General information

Information about the company

Description of the organisation:

Knauf Insulation has more than 40 years of experience in the insulation industry and is one of the most respected names in insulation worldwide. Knauf Insulation is manufacturing products and solutions mainly in glass and rock mineral wool. We operate more than 37 manufacturing sites globally in 15 countries and employ more than 5,000 people. The Headquarters are located in Belgium, in Visé.

Product-related or management system-related certifications:

All Knauf Insulation sites, including the related site for this EPD, are ISO 9001, ISO 14001, ISO 50001 and ISO 45001 certified under the scope "Design, Development and Production of Insulation Materials and Systems".

Name and location of production site:

The application in construction of the concerned product is mainly in Europe. The data utilized for the production stage life cycle assessment are related to a production plant located in Novi Marof in Croatia and Surdulica in Serbia.

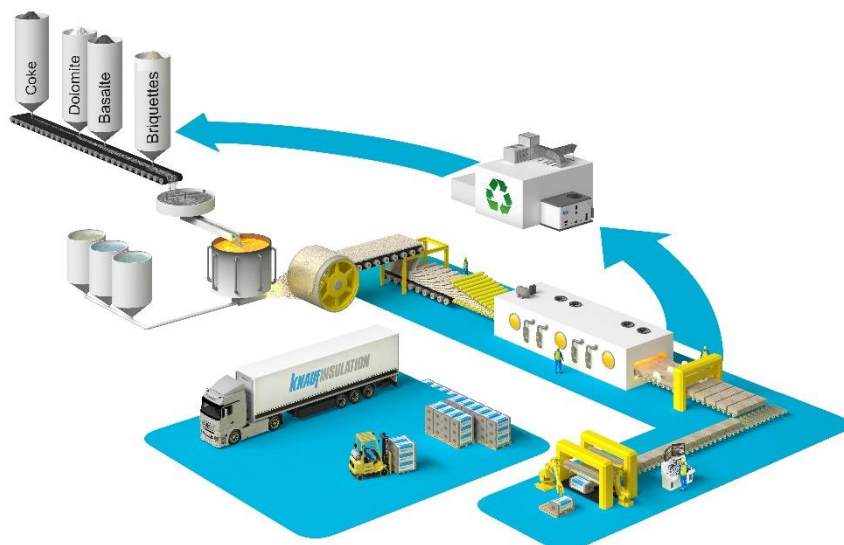

Knauf Insulation d.o.o., Varaždinska 140, HR - 42220 Novi Marof, Croatia

Industrijsko naselje Belo Polje bb, 17530, Surdulica, Serbia

Information about Rock Mineral Wool production

The Rock Mineral Wool Products for Building Construction are available in the form of slabs, boards, lamellas and rolls. The density for rock mineral wool products ranges from 20 to 200 kg/m³. In terms of composition, the inorganic part (92-98%) is composed of volcanic rocks, typically basalt, and some dolomite and with an increasing proportion of recycled material in the form of briquettes, a mix of stone wool scrap, other secondary materials and cement.

The remaining fraction is the bio-organic binder named ETechnology®. The main constituent of the binder is dextrose extracted from plants.

Product information

Product name: NaturBoard VENTI GVB, NaturBoard VENTI

Product identification: The declared insulation products NaturBoard VENTI GVB, NaturBoard VENTI are multifunctional rock mineral wool insulation board which provides excellent technical properties, such as thermal, sound insulation in various building structures. The reference product is a compact rock mineral wool faced slab of 1 m² and 50 mm (considered for this EPD). If indicators values for other thicknesses are required, they may be obtained by linear extrapolation of those values.

For the placing on the construction products market in the European Union/ EFTA (with exception of Switzerland), the Regulation/ (EU) No 305/2011/ applies. The concerned products need Declarations of Performance /DoP R4305LPCPR/ R4224LPCPR taking into consideration the harmonized product standard /EN 14064-1/ and the /CE-mark/.

Product description: The reference product Rock mineral wool boards are multifunctional insulation boards used mostly as an insulating filler for thermal, sound and fire protection of building structures, where the insulation is not directly exposed to mechanical loads. They are most often installed as insulation in pitched roofs, partition walls, suspended acoustic ceilings and as insulation of external walls and internal insulation in dry-mounted Knauf walls.

The reference product is also often used in ventilated façades due to increased water repellence.

UN CPC code:

37990: Non-metallic mineral products (including mineral wool, expanded mineral materials, worked mica, articles of mica, non-electrical articles of graphite or other carbon and articles of peat).

Geographical scope:

The product is manufactured in Novi Marof in Croatia and Surdulica in Serbia with related country energy mix for electricity. Regarding the market area, the product is mainly marketed in Europe.

Energy:

Electricity mix and gas are taken from related country datasets with reference year 2015.

Technical Characteristics:

Parameter	Value
Thermal conductivity/ EN 13162	0.035 W/(mK)
Water vapor diffusion resistance (EN 12086)	1
Thermal Resistance (ISO 8301)- R	1.43 m ² K/W
Reaction to fire (EN 13501-1)	A1
Declared density range/ EN 1602	50 kg/m ³ (+/-10%)

LCA information

Functional unit / declared unit:

The declared unit is 1 m² of Rock Mineral Wool NaturBoard VENTI GVB, NaturBoard VENTI with a thickness of 50 mm. The declared lambda is 0.035 W/mK. The density used for the calculation of this specific LCA is 50 kg/m³.

Reference service life: The RSL or durability of NaturBoard VENTI GVB, NaturBoard VENTI is as long as the lifetime of the building equipment in which it is used (at least 50 years).

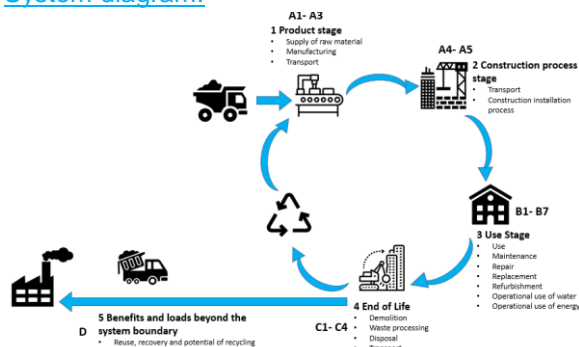

Time representativeness:

Plant data for Surdulica (Serbia) for 2018 complete year while Novi Marof (Croatia) plant data for 2016.

Database(s) and LCA software used:

The LCA model, the data aggregation and environmental impacts are calculated with the software GaBi 9.2 and its Service Pack 40 databases. Since hardly any datasets are available for Croatia and Serbia, background data for Europe and/or Germany are used as much as possible.

System diagram:

Description of system boundaries:

The system boundary of the EPD follows the modularity approach defined by the /EN 15804+A1/. **The type of EPD is cradle to grave.**

List and explanation of the modules declared in the EPD.

The product stage (A1-A3) includes:

- A1 - raw material extraction and processing, processing of secondary material input (e.g. recycling processes),
- A2 - transport to the manufacturer and
- A3 - manufacturing.

This includes provision of all materials, products and energy, packaging processing and its transport, as well as waste processing up to the end-of-waste state or disposal of final residues during the product stage.

The LCA results are given in an aggregated form for the product stage, meaning that the modules A1, A2 and A3 are considered as a unique module A1-A3.

Product Parameters	Value
Declared Density	50 kg/m ³
Rock mineral wool weight (without facing weight)	2.5 kg
Surface	1 m ²
Thickness	50 mm
Volume	0.05 m ³
Facing (Glass Black Veil)	0.075 kg
Packaging Plastic sheet	0.08 kg
Packaging Wooden pallet	0.33 kg

The construction process stage includes:

- A4 - transport to the construction site and
- A5 - installation into the building.

The transport to the building site (A4) and installation (A5) included in this LCA use the following parameters:

Parameter	Value
Average transport distance	600 km
Type of fuel and vehicle consumption or type of vehicle used for transport.	Truck Euro 6 (28 – 32 t / 22 t payload). 33 L for 100 km (if 100 % utilization).
Truck capacity utilization (including 30% of empty returns)	20 % of the weight capacity
Loss of materials in construction site	2%
Packaging Wooden pallet	40% recycled, 60% incinerated
Packaging Plastic sheet	40% recycled, 60% incinerated

The treatment of the packaging waste after the installation of the product (A5) has been considered.

The Use stage (B1-B7) includes:

- B1: Use
- B2: Maintenance
- B3: Repair
- B4: Replacement
- B5: Refurbishment
- B6: Operational Energy Use
- B7: Operational Water Use

Once installation is complete, no actions or technical operations are required during the use stages till the end of life. Therefore, the mineral wool has no impacts (excluding potential energy savings) on this stage.

The end-of-life stage includes:

- C1 - de-construction, demolition,
- C2 - transport to waste processing,
- C3 - waste processing for reuse, recovery and/or recycling and
- C4 - disposal.

This includes provision of all transports, materials, products and related energy and water use. The common manual dismantling impact of insulation is considered as very small and can be neglected in C1.

Although Rock Mineral Wool products from Knauf Insulation are partly recycled at their end-of-life, an established collection system does not exist yet. Therefore, the assumption chosen in this study, 100% landfill (C4) after the use phase, is the most conservative approach.

Parameter	Value
Disposal type (mineral wool)	100% landfill
Average transport distance waste (C2)	50 km
Type of fuel and vehicle consumption or type of vehicle used for transport.	Truck-trailer, Euro 3, 34 - 40t gross weight / 27t payload capacity/ 40 L for 100 km (if 100 % utilization).
Truck capacity utilization	50 % of the weight capacity

Module D includes reuse, recovery and/or recycling potentials. According to /EN 15804+A1/, any declared benefits and loads from net flows leaving the product system not allocated as co-products and having passed the

end-of waste state shall be included in module D. Benefits considered in module D originate from packaging recycling or incineration.

Content Declaration

The product does not contain substances from the "Candidate List of Substances of Very High Concern for Authorisation" under the REACH regulation (above 0.1% weight/weight).

Recycled material

The mineral wool waste that is originating from the manufacturing process is recycled internally through the use of briquettes (mineral wool waste and additional cement) that are reinjected into the batch. For 2018 year, no external waste is considered in this specific LCA.

Additional information:

All raw materials for the manufacturing of the declared product, the required energy, water consumption and the resulting emissions are considered into the LCA. Consecutively, the recipe components with a share even less than 1% are included. All neglected processes contribute less than 5% to the total mass or less than 5% to the total energy consumption. For information, the impact of the Rock Mineral Wool plant construction or machines, are not taken into account in the life cycle assessment. Allocation criteria if any are based on mass.

Knauf Insulation adopts a "worst case" approach into its EPDs.

Knauf Insulation supports the Ten Principles of the United Nations Global Compact on human rights, labour, environment and anti-corruption.

Abiotic Depletion Potential (ADPF)	39.345	39.667	-0.82%

LCA interpretation

ENVIRONMENTAL IMPACTS

All impact categories, except the Abiotic Depletion Potential Element and the Ozone Depletion Potential, are dominated by the manufacturing processes. This can be explained by the huge impact of the energy use (electricity, natural gas and coke) for Rock Mineral Wool production.

The Global Warming Potential (GWP) is clearly dominated by the manufacturing processes impact (70%). Mostly due to the CO₂ emissions by the cupola furnace and the energy consumption at different levels. The coke is unfortunately generating quite a lot of CO₂ during the melting process. CO₂ is also generated upstream during the electricity production. However, the bio-based binder allows some sequestration of CO₂ thanks to CO₂ capture during plants growth. The transport to construction site has however an impact of less than 10%.

The Ozone layer Depletion Potential (ODP) is mostly influenced by construction site installation by considering plastic packaging incineration with energy valorisation.

The Acidification Potential (AP) is dominated by the manufacturing due to the emissions related to the raw materials melting process for example sulphur dioxides emissions and the energy consumption.

The Eutrophication Potential (EP) is mostly due to the manufacturing, especially due to the ammonia emission during binder application into the plant.

The Photochemical Ozone Creation Potential (POCP) is dominated by the manufacturing (emissions in the cupola furnace and energy consumption). The main emissions contributing to this impact category are sulphur dioxide and nitrogen oxides.

The Abiotic Depletion Potential Element (ADPe) is mainly due to the cement utilized in the briquettes production process in order to recycle secondary materials from the lines, the briquettes are reinjected into the melting batch. The impact of the raw materials in general, like the volcanic rock basalt, is very minor as this material is very abundant on Earth.

The Abiotic Depletion Potential Fossil (ADPf) is dominated by the use of coke as energy carrier. Next to the coke, we have also the impact of natural gas and upstream the electricity energy mix.

RESOURCES USE

The mains impact on **Primary Energy Demand from Non-Renewable** resources is from the manufacturing process of rock mineral wool products, especially due to the energy carrier, the coke, and the global energy consumption (gas and electricity).

The **Primary Energy Demand from Renewable** resources is dominated by the bio-based binder and the packaging, especially the wooden pallets.
