KNAUF INSULATION DAP INSULATION PAPER

High density / low thickness glass mineral wool insulation products.

DESCRIPTION

Knauf insulation DAP INSULATION PAPER (DAP IP) are high density products, manufactured from high purity glass fibers, specially processed to offer excellent performance in high temperature applications (maximum service temperature up to 550 °C) where low thickness of insulation is required (standard 2 – 7 mm).

High-tech production technologies ensure uniform fiber distribution and close control of products’ thickness and density.

Due to the unique non-woven fibre bonding process, the felts do not contain organic binders. With this special production process we are able to guarantee that no emissions of odorous and/or harmful substances are emitted during the use of appliances even at the highest temperatures.

Standard dimensions

- Thickness: 2 – 7 mm
- Standard roll width: 1,200 mm
- Product dimensions are adapted to customer requirements.

PERFORMANCE

Maximum service temperature
DAP INSULATION PAPER has a maximum service temperature of 550 °C

Thermal insulation
Optimal thermal insulation properties ensure ideal energy efficiency and energy consumption

Certified quality
LGA Certified
Complies with RoHS Directive
Complies with REACH Regulation

BENEFITS

- High temperature stability and resistance
- Thermal insulation properties ensure optimal energy efficiency and energy consumption
- Fire Hazard Classification FHC 0/0
- Non-corrosive insulation material (AS Quality)
- No organic binders
- Emission-free
- Can be laminated with Al foil or glass veil

APPLICATION

Thermal protection of applications, where limited space for insulation is available.

STANDARD

Technical properties of Knauf Insulation DAP INSULATION PAPER are declared in accordance with EN 14303.

HANDLING & STORAGE

Knauf Insulation DAP INSULATION PAPER is packed on a wooden or plastic pallet. Products are covered with PE foil or wrapped twice with stretch foil, which is designed for short-term protection only. It is recommended to store the product either indoors, or under a cover and off the ground, for a maximum of up to 12 months.

If the material becomes damp on location, ensure the moisture evaporates before placing the felts into a manufacturing process.

The performance of DAP INSULATION PAPER depends on the customer’s manufacturing process. Individual customers must optimize and control their manufacturing process to ensure the material meets the requirements of their manufacturing process and their final product.
