KNAUF INSULATION DAP NFS H

Needled felts for professional household appliances and night storage heaters.

**DESCRIPTION**

Knauf Insulation DAP NEEDLE FELT H (DAP NFSH) products are made of long mineral wool fibres specially needled to form a compact, dimensionally-stable felt with high temperature stability and excellent thermal insulation properties. Due to its highest insulation performance standards, it can be used for insulating professional household appliances and night storage heaters, as well as self-cleaning pyrolytic ovens, where operating temperatures may reach as high as 750 °C. Product dimensions, sections and facing options can all be adapted to customer requirements.

Owing to the unique fibre bonding process, the felts do not contain organic binders or process aids and therefore comply with LGA test for contaminants, valid for mineral fibres in cookers and ovens. With this special production process we are able to guarantee that no emissions of odorous and/or harmful substances are emitted during the use of oven sand cookers even at the highest temperatures.

Needled felts are tested for the presence of the restricted substances and comply to the RoHS directive and REACH regulation.

**PERFORMANCE**

- **Maximum service temperature**
  DAP NFS H has a maximum service temperature of 750 °C

- **Thermal insulation**
  Optimal thermal insulation properties ensure ideal energy efficiency and energy consumption

- **Certified quality**
  LGA Certified
  Complies with RoHS Directive
  Complies with REACH Regulation

**APPLICATION**

- Insulation of professional electric or gas ovens and night storage heaters that meet or exceed energy Class A standards.
- Insulation of self-cleaning, pyrolytic ovens and night storage heaters where operating temperatures may reach as high as 750 °C.

**BENEFITS**

- High temperature stability and resistance
- Thermal insulation properties ensure optimal energy efficiency and energy consumption
- Non-corrosive insulation material (AS Quality)
- Fire protection (European Class A1) - material melting point above 1000 °C
- Fire Hazard Classification FHC 0/0
- No organic binders
- Emission-free
- Custom forms and sections

**STANDARD**

Technical properties of Knauf Insulation DAP NFS H are declared in accordance with EN 14303.

HANDLING & STORAGE

Knauf Insulation DAP NFS H is packed on a wooden or plastic pallet. Felts are covered with PE foil or wrapped twice with stretch foil, which is designed for short-term protection only. It is recommended to store the product either indoors, or under a cover and off the ground, for a maximum of up to 12 months.

If the material becomes damp on location, ensure the moisture evaporates before placing the felts into a manufacturing process.

The performance of DAP NFS H depends on the customer’s manufacturing process. Individual customers must optimize and control their manufacturing process to ensure the material meets the requirements of their manufacturing process and their final product.
